Learn a new phone feature

Use AI to get simple, numbered steps for your own phone, and go one step at a time, at your own pace.

By the end, you'll be able to:

- tell AI exactly which phone you have
- follow steps one at a time
- spot steps meant for a different phone

Warm-up What would you like your phone to do?

Talk about it with your group. Is there something you've always wanted to know how to do on your phone?

1 Choose a feature

Tick the ones you'd like to learn.

	I can do this	I'd like to learn
Make the text bigger		
Use the torch		
Use the phone as a magnifying glass		
Add emergency information for paramedics		
Type by speaking		
Block nuisance calls		

Which phone do you have? (Look in Settings, under "About".)

2 Ask AI

If you have a device, try this prompt, with your own phone and feature.

TRY THIS PROMPT

I have an iPhone 13. Please show me how to make the text bigger, in short numbered steps, in plain English. Please give me one step at a time, and wait for me to say "done" before giving the next one.

3 Wrong phone?

An iPhone user got this answer. What's gone wrong?

EXAMPLE AI ANSWER

1. Swipe down from the top of the screen and tap the gear icon.
2. Tap Display.
3. Tap Font size and style.
4. Drag the slider to the right.

4 If you get stuck

Write what you could say to AI if a step doesn't match what you see.

5 Good habits

- Say exactly which phone you have. Steps differ between makes and models.
- Ask for one step at a time.
- You can't break your phone by looking in Settings. Take your time.

> **No device?** In pairs, explain to your partner how to do one thing on your phone, step by step, without touching their phone.

Find out more: read the free step-by-step guide, with a 10-second video, at **nosebleed.si/ideas/learn-a-new-phone-feature**

Teacher notes: Learn a new phone feature

Time: 45 to 60 minutes

Level: beginners; no AI experience needed

Group: any size; works well in pairs

You'll need: a copy per learner; phones or tablets with an AI chat app (optional)

Before the session

Try the prompt with your own phone. Learners with different phones get different steps, which makes the point well. Have a helper on hand for one-to-one help.

Running order

5 min	**Warm-up.** What we'd like phones to do.
10 min	**Part 1.** Choose a feature; find the phone model.
20 min	**Parts 2 and 3.** Try the prompt, then the wrong-phone answer.
10 min	**Part 4.** When a step doesn't match.
5 min	**Wrap-up.** Which phone, one step at a time.

Answers: Part 3

These steps are for an **Android** phone (a gear icon after swiping down; "Font size and style" on some Android phones). The AI didn't use the phone the user mentioned, or the user didn't say. On an iPhone, the setting is in the Settings app, under Display & Brightness, or Accessibility.

Part 4: an example

"I can't see 'Display'. I can see Sound, Wallpaper and Battery. What should I tap?" Describing what you see helps AI correct itself.

Discussion points

- Menus change when phones update, so even good steps can be slightly out of date.
- Emergency information can be shown on the lock screen, so paramedics can see it.
